Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Wert et al. (US 6,281,706 B1).

In figures 7A and 8, Wert teaches an output buffer circuit comprising:

a first drive circuit comprising first and second output transistors (701, 711);

an input signal (301);

a second drive circuit comprising third and fourth output transistors (705, 717);

an output terminal (305), wherein the third and fourth output transistors having lower impedance than the first and second output transistors (inherent, see col. 3, lines 8-18, col. 4, 3-20).

a delay circuit (728, 727);

a first control circuit (707, 719) and a second control circuit (310) generating first (output of 703), second (output of 713), third (725), and fourth (726) control signals; and

a plurality of sub-drive circuits (812-819), wherein at least one of the sub-drive circuits is selectively enabled to set the output impedance of the second drive circuit (col. 4, line 61 - col. 5, line 32).

Method claims 1-4 are essentially the same in scope as apparatus claims 5-11 and are rejected similarly.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
